EAFP-5M Book series on Aquatic Animal Diseases

European Association of Fish Pathologists (EAFP) and 5m Books New Book Series in Aquatic Animal Diseases

When culturing aquatic species, the proper maintenance of health is essential to the sustainability of production. Disease epidemics, for example outbreaks of infectious salmon anaemia (ISA) in Chile, and early mortality syndrome (EMS) in shrimp in SE Asia have caused widespread and devastating effects on the aquaculture industries in the affected countries. In order for aquatic animal diseases to be properly prevented, identified, monitored, treated and managed, there is a constant need for high quality and authoritative books to inform the range of personnel working in the aquaculture industry.

The new **EAFP / 5m Books Series** encompasses professional-level reference books and practical guides aimed at fish farm operatives and technicians, fish biologists and pathologists, veterinarians, students who are studying aquaculture and fish health, and the many personnel involved in supplying the aquaculture industry with pharmaceuticals, nutraceuticals, feed and equipment.

The first files in the series include:

- Ariadna Stija-Bobadilla, James E. Bron, Geert F. Wiegertjes and M. Carla Piazzon (Eds) 2021. Fish Parasites: A Handbook of Protocols for their Isolation, Culture and Transmission
- Albert Tacon 2022. A Handbook of Nutritional Disorders and Diseases of Fish and Shrimp
- Bartolomeo Gorgoglione and Christyn Bailey (Eds) 2022. Proliferative Kidney Disease

The **European Association of Fish Pathologists (EAFP)** exists to promote the exchange of knowledge and co-ordination of research related to fish and shellfish pathology. Membership of the EAFP is open to all fish and shellfish pathologists, students of fish pathology and organisations, agencies or other associations which have an interest in maintaining the objectives of the EAFP. <https://eafp.org>

5m Books provides professional-level books for people and businesses in aquaculture, fisheries, agriculture, veterinary sciences and the global food chain. www.5mbooks.com

If you would be interested in putting together a new book to be considered for inclusion into the new **EAFP / 5m Books Series**, please contact Sean Monaghan s.j.monaghan@stir.ac.uk or Alessandro Pasini alessandro@5mbooks.com

Fish Parasites

A Handbook of Protocols for their Isolation, Culture and Transmission

EUROPEAN ASSOCIATION OF FISH
PATHOLOGISTS / 5M BOOK SERIES
Edited by Ariadna Sitjà-Bobadilla,
James. E. Bron, Geert Wiegertjes
and M. Carla Piazzon

Fish Parasites contains detailed outlines of the most up to date protocols for parasite isolation, culture and transmission, as well as detailed procedures for reproducing parasitic infections in a laboratory environment.

Protocols for tasks such as monitoring parasitic infection, isolating parasites and preparing parasite material are explained in detail. In addition, an introduction is provided to the biology and host interactions of each parasite discussed.

Fish Parasites provides an essential guide for those who are currently researching fish-parasite relations, as well as for those who may study fish health and welfare more generally or otherwise have broader interests in fish parasites.
