5m's Representative

Nigel Balmforth, Head of Publishing, 5m Publishing, Sheffield, UK
nigel.balmforth@5mpublishing.com

The EAFP and 5m Publishing are pleased to announce a new partnership in the publication of an exciting, definitive and high quality series of books.

When culturing aquatic species, the proper maintenance of health is essential to the sustainability of production. Disease epidemics, for example recent outbreaks of infectious salmon anaemia (ISA) in Chile, and early mortality syndrome (EMS) in shrimp in South East Asia have caused widespread and devastating effects on the aquaculture industries in the affected countries. In order for aquatic animal diseases to be properly prevented, identified, monitored, treated and managed, there is a constant need for high quality and authoritative books to inform the range of personnel working in the aquaculture industry. The new book series will encompass professional-level reference books and practical guides aimed at fish farm operatives and technicians, fish biologists and pathologists, veterinarians, students who are studying aquaculture and fish health, and the many personnel involved in supplying the aquaculture industry with pharmaceuticals, nutraceuticals, feeds, and related equipment.

If you would be interested in putting together a new book for inclusion into the new EAFP / 5m Book Series, please contact Sean Monaghan or Nigel Balmforth

The European Association of Fish Pathologists (EAFP) exists to promote the exchange of knowledge and co-ordination of research related to fish and shellfish pathology. Membership of the EAFP is open to all fish and shellfish pathologists, students of fish pathology and organisations, agencies or other associations which have an interest in maintaining the objectives of the EAFP.

5m Publishing (5m) provides access to expertise, education and knowledge transfer for people and businesses in the aquaculture, agriculture, veterinary and global food chain. 5m is part of Benchmark Holdings, which has at its core focus sustainability throughout the food chain and the highest possible standards of animal health and welfare. It aims to provide health solutions for aquatic and terrestrial animals, robust breeding and genetics programmes and research practice and direction for aquaculture, agriculture and food chain companies. www.thefishsite.com www.5mpublishing.com
